CLAIMS

- 1. An isolated nucleic acid molecule selected from:
 - (a) nucleic acid molecules comprising a nucleotide sequence as shown in SEQ ID NO: 1 or 3;
 - (b) nucleic acid molecules comprising a nucleotide sequence capable of hybridizing, under stringent hybridization conditions, to a nucleotide sequence complementary to the polypeptide coding region of a nucleic acid molecule as defined in (a); and
 - (c) nucleic acid molecules comprising a nucleic acid sequence which is degenerate as a result of the genetic code to a nucleotide sequence as defined in
 (a) or (b).
- An isolated polypeptide encoded by the nucleic acid molecule according to claim
- The isolated polypeptide according to claim 2 having an amino acid sequence shown as SEQ ID NO: 2 or 4 in the Sequence Listing
- 4. A vector harboring the nucleic acid molecule according to claim 1.
- A replicable expression vector which carries and is capable of mediating the expression of a nucleotide sequence according to claim 1.
- 6. A cultured host cell harboring a vector according to claim 4 or 5.
- A process for production of a polypeptide, comprising culturing a host cell
 according to claim 6 under conditions whereby said polypeptide is produced, and
 recovering said polypeptide.
- A method for identifying an agent capable of modulating a nucleic acid molecule according to claim 1, comprising
 - (i) providing a cell comprising the said nucleic acid molecule;

- (ii) contacting said cell with a candidate agent; and
- (iii) monitoring said cell for an effect that is not present in the absence of said candidate agent.
